INDIVIDUAL RATEPAYER COMMENT TO THE PUBLIC SERVICE
COMMISSION OF THE STATE OF DELAWARE:

PSC Docket No. 06-241

Review and Approval of the Request for Proposals for the Construction of New
Generation Resources under 26 DEL. C. § 1007(d)

Dear Members of the Public Service Commission:

I am a resident and utility ratepayer in Delaware. I understand that the Public Service Commission is re-examining the proposal of Bluewater Wind to build an offshore wind facility in Delaware. This re-examination is not surprising. Efforts to create a clean and renewable energy future would inevitably bring out powerful and well-financed opposition from traditional, dirty energy interests. In this context, I wish to express my strong support for Bluewater Wind's proposal to build an offshore wind facility.

Bluewater Wind's proposal protects the environment. Burning fossil fuels contributes to Delaware's chronic air pollution problems; it exacerbates global warming, a trend that threatens Delaware's historic coastline. The offshore wind proposal will produce NO air, water, or land pollution, and will contribute no greenhouse gas emissions.

Bluewater Wind's proposal is good for the economy. Continuing to depend solely on fossil fuels ensures an ever-escalating cost of energy. Fossil fuel costs increase each year and are predicted to do so indefinitely. We cannot continue to remain dependent on energy that has such cost volatility and that has to be imported into the state.

Delaware is known as the First State because of its historic patriotism. Supporting energy from non-fossil fuels benefits the nation's energy independence, increases Delaware's energy security, promotes economic development and protects the environment.

As a resident of Delaware, I am proud that my state will be the first in the nation to build offshore wind. I urge you to move forward with the approval process for the Bluewater Wind facility.

Sincerely,

Eric M Lee

Bluewater Wind's proposal protects the environment. Burning fossil fuels contributes to Delaware's chronic air pollution problems; it exacerbates global warming, a trend that threatens Delaware's historic coastline. The offshore wind proposal will produce NO air, water, or land pollution, and will contribute no greenhouse gas emissions.

Bluewater Wind's proposal is good for the economy. Continuing to depend solely on fossil fuels ensures an ever-escalating cost of energy. Fossil fuel costs increase each year and are predicted to do so indefinitely. We cannot continue to remain dependent on energy that has such cost volatility and that has to be imported into the state.

Delaware is known as the First State because of its historic patriotism. Supporting energy from non-fossil fuels benefits the nation's energy independence, increases Delaware's energy security, promotes economic development and protects the environment.

As a resident of Delaware, I am proud that my state will be the first in the nation to build offshore wind. I urge you to move forward with the approval process for the Bluewater Wind facility.

Sincerely,

4000 Suiky Rd

INDIVIDUAL RATEPAYER COMMENT TO THE PUBLIC SERVICE
COMMISSION OF THE STATE OF DELAWARE:

PSC Docket No. 06-241

Review and Approval of the Request for Proposals for the Construction of New
Generation Resources under 26 DEL. C. § 1007(d)

Dear Members of the Public Service Commission:

I am a resident and utility ratepayer in Delaware. I understand that the Public Service Commission is re-examining the proposal of Bluewater Wind to build an offshore wind facility in Delaware. This re-examination is not surprising. Efforts to create a clean and renewable energy future would inevitably bring out powerful and well-financed opposition from traditional, dirty energy interests. In this context, I wish to express my strong support for Bluewater Wind's proposal to build an offshore wind facility.

Bluewater Wind's proposal protects the environment. Burning fossil fuels contributes to Delaware's chronic air pollution problems; it exacerbates global warming, a trend that threatens Delaware's historic coastline. The offshore wind proposal will produce NO air, water, or land pollution, and will contribute no greenhouse gas emissions.

INDIVIDUAL RATEPAYER COMMENT TO THE PUBLIC SERVICE
COMMISSION OF THE STATE OF DELAWARE:

PSC Docket No. 06-241

Review and Approval of the Request for Proposals for the Construction of New
Generation Resources under 26 DEL. C. § 1007(d)

Dear Members of the Public Service Commission:

I am a resident and utility ratepayer in Delaware. I understand that the Public Service Commission is re-examining the proposal of Bluewater Wind to build an offshore wind facility in Delaware. This re-examination is not surprising. Efforts to create a clean and renewable energy future would inevitably bring out powerful and well-financed opposition from traditional, dirty energy interests. In this context, I wish to express my strong support for Bluewater Wind's proposal to build an offshore wind facility.

Bluewater Wind's proposal protects the environment. Burning fossil fuels contributes to Delaware's chronic air pollution problems; it exacerbates global warming, a trend that threatens Delaware's historic coastline. The offshore wind proposal will produce NO air, water, or land pollution, and will contribute no greenhouse gas emissions.

Bluewater Wind's proposal is good for the economy. Continuing to depend solely on fossil fuels ensures an ever-escalating cost of energy. Fossil fuel costs increase each year and are predicted to do so indefinitely. We cannot continue to remain dependent on energy that has such cost volatility and that has to be imported into the state.

Delaware is known as the First State because of its historic patriotism. Supporting energy from non-fossil fuels benefits the nation's energy independence, increases Delaware's energy security, promotes economic development and protects the environment.

As a resident of Delaware, I am proud that my state will be the first in the nation to build offshore wind. I urge you to move forward with the approval process for the Bluewater Wind facility.

Sincerely,

Andrea Pontani
